entity history
features
benchmark (odds / NWP)
not explained
Chaos ($h = 0.25$, $\sigma_o = 10^{-3}$)
Qubit (full θ, exact)
Qubit (live ibm_kingston)
Qubit (IBM device noise)
Rain tomorrow (+NWP)
President by state
Bad qubit at next calibration (IBM)
US House seats
Football (+odds)
Earnings guidance
Rain tomorrow
Earthquakes (week, cell)
